

## Healthy Volunteers Needed for Stroke Recovery Study

We seek to understand changes in the brain's structure and function after a stroke, and how these changes relate to stroke outcome. We are seeking healthy volunteers who have NOT had a stroke to participate in a brain imaging study. We are particularly interested in volunteers older than 45. The study will be conducted in the Charlestown Navy Yard imaging facility of the Massachusetts General Hospital. The study will involve MRI and testing of motor function of your hands. It will take about 2 hours. You will be paid \$50 and given a voucher that will cover the cost of parking. If you want to learn more about this study, please call Judith Schaechter, PhD at 617-726-5622 or email [judith@nmr.mgh.harvard.edu](mailto:judith@nmr.mgh.harvard.edu).
